

uSee security solution for a Logistic company

OVERVIEW

Our client Gateway Studios & Production Services provides top-tier live touring production services. To secure their expansive area, the company required a high-performance video surveillance system. They implemented the uSee platform across 65 strategically placed cameras, integrated with the VCA plugin. This system leverages artificial intelligence and object recognition to offer real-time monitoring and a comprehensive overview of company activities, enhancing overall security and operational efficiency.

CLIENT

GATEWAY STUDIOS & PRODUCTION SERVICES

Gateway Studios & Production Services offers production services - such as audio, lighting, video, and streaming - for a wide variety of live events.

From small shows to national tours headlined by the biggest names in the business, there is not a venue type the company does not have experience with - or a road it has not traveled.

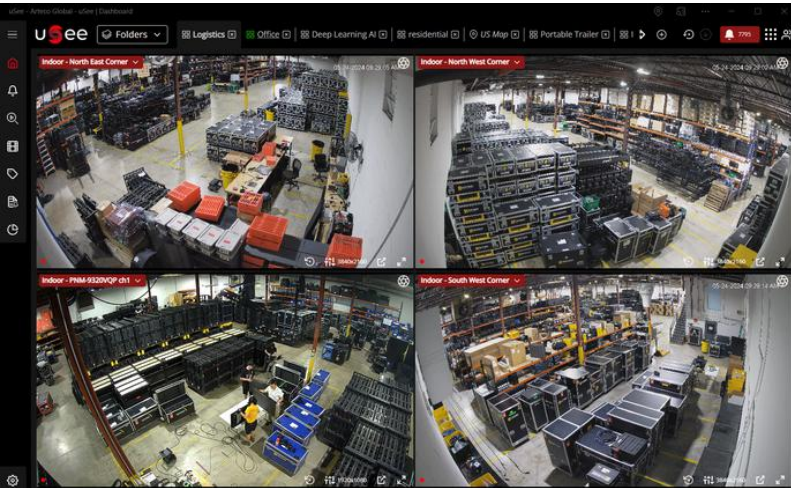

Logistics

www.gsps.com

St. Louis, USA

Through the use of artificial intelligence and object recognition technologies, the system will automatically recognize and analyze various objects and situations. With uSee, the company will benefit from **real-time monitoring**, thus obtaining a **comprehensive and constantly updated overview** of activities within its facilities.

CHALLENGE ▼

The client operates a 20,000 square foot warehouse to store, test, and maintain its vast collection of stage sound, lighting, and rigging equipment. It was therefore essential to have a **high-performance video surveillance system that could cover the entire site**, thus encompassing the various logistics areas and transit routes.

SOLUTIONS ▼

The installation of the uSee platform took place on **65 cameras strategically distributed** throughout the company. This solution is further enhanced by the **integration of our VCA plugin**, which offers advanced video content analysis capabilities. However, uSee's software is not limited to simply recording and archiving footage.

uSee took the complexity out of managing our expansive camera system. The platform offers a user-friendly interface that seamlessly adapts to desktops, phones, and tablets. This flexibility makes navigating the system and finding footage effortless, regardless of the device we're using.

Terry Cook
Director of IT

BENEFITS ▼

- 1 VCA**
Automatically extracts relevant metadata from people, objects, and surroundings for accurate alarms in uSee.
- 2 Multi-platform**
uSee is accessible from any internet-connected device, at any time and from anywhere.
- 3 Mapping**
Through the Geo Maps feature, uSee provides the best performance in terms of usability and analysis.
