

uSee security solution for a construction company

OVERVIEW

Our client Brahms Construction wanted to uphold high standards while innovating their approach to security and safety on construction sites. With uSee's advanced video surveillance, Brahms Construction has upgraded security measures and enhanced site protection, supporting smooth and secure project operations.

CLIENT

BRAHMS CONSTRUCTION

Brahms Construction is a full service design-build general contractor specializing in Assisted Living and Memory Care communities across the United States. Based in St. Louis, Brahms brings a Midwestern work ethic to innovative solutions, serving clients nationwide with a **blend of traditional and forward-thinking construction practices.**

CHALLENGE ▼

Managing construction sites that span various locations and often remote or open areas presents a **unique set of security challenges** for Brahms Construction.

To safeguard their work sites and prevent unauthorized access, Brahms sought a **reliable surveillance solution with real-time threat detection, adaptable to various site conditions.**

They required a platform with **advanced analytics** to identify potential intrusions, as well as **remote monitoring capabilities** to allow for immediate response, all while ensuring ease of use for the team.

SOLUTIONS ▼

Brahms Construction deployed uSee's advanced surveillance system **across six trailers, each equipped with onboard analytics for real-time detection** of people and vehicles within the secured perimeter.

These trailers **are linked to a centralized live monitoring station**, ensuring **real-time alerts** are transmitted to security personnel who can take immediate action if needed.

uSee's platform enables Brahms' team to monitor activity from anywhere, **fostering a proactive security stance** that deters unauthorized access.

uSee by Arteco is a key component to our construction site security. The software is intuitive and makes it easy to access both live and recorded video.

The added benefit of the remote video monitoring provides an additional layer of protection during off-hours.

Brahms Construction

BENEFITS ▼

- 1
Enhanced Site Security
 Real-time analytics enable proactive alerts, allowing rapid response to any suspicious activity on-site.
- 2
Streamlined Operations
 uSee's platform enables seamless oversight of each site, helping Brahms maintain smooth operations.
- 3
Ease of Use
 uSee's user-friendly platform allows to easily monitor live feeds, set alerts, and access footage when needed.
